STANDEX MODULAR SHOWCASES

Modular display cases are constructed from a small quantity of interchangeable components that can create a single or a multiple format display case.

The multi formats can be in a linear, square or cross design.

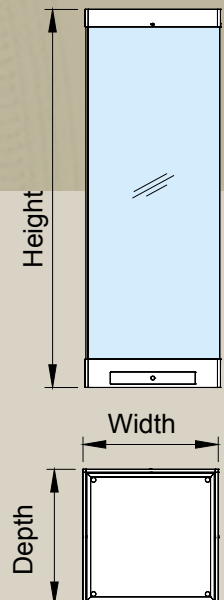

Access doors can be hinged or lift out – all secured with discrete locks.

All materials used within the artefacts area – the panels, seals, powder coating, glass and bonding agents – are all inorganic inert materials.

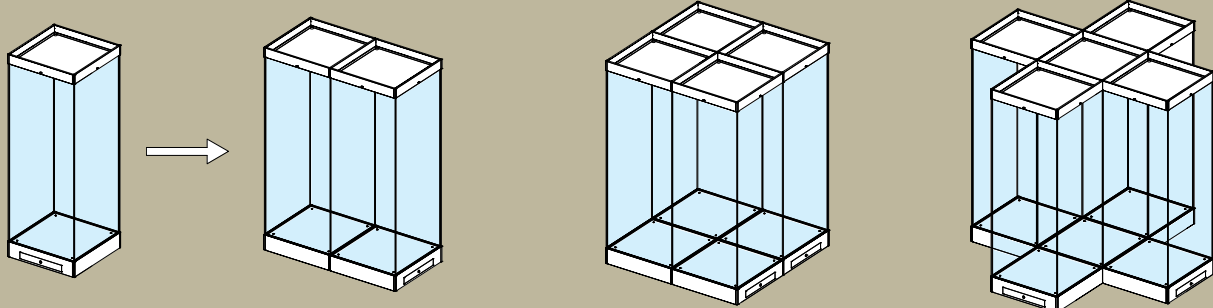

Fully glazed display cases – no uprights

The display cases are manufactured to order – the example shown is 700 x 700 x 2100. Glass supplied as specified – toughened – laminated – anti reflective - and or safety glass.

Examples of modular formats:

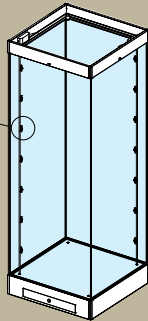

The Standex modular display cases can be disassembled and then rebuilt in different modular formats.

ACCESSORIES:

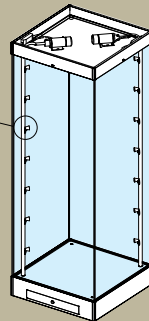

ILLUMINATION

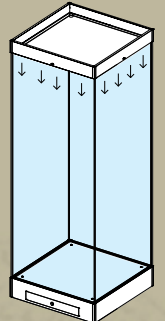

Libra LED

XPO fibre optic

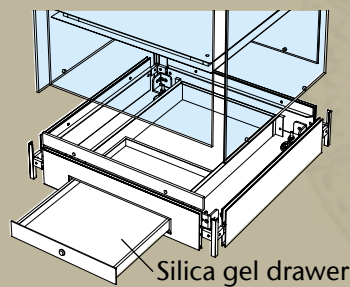

LED top illuminated panel

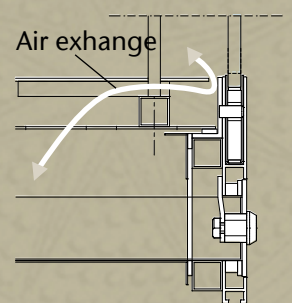

For illumination of the display cases we use fibre optic lights or LED.

CLIMATE CONTROL

Passive climate control with silica gel or ProSorb.

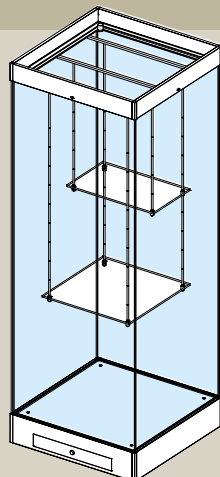

Silica gel drawer

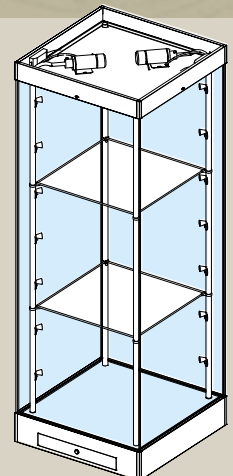

Air exchange

SHELVING

Suspended shelves on modular steel rods.

Shelves locating on the light tracks

Display cases can be supplied fully equipped:

- Passive climate control (silica gel or ProSorb) – externally managed
- Suspended shelves with modular steel rods
- Suspension of artifacts on removable top fixings
- LED and fibre optic lights as top lighting or on vertical corner tracks
- Light panel in the top
- Removable podiums in metal and wood
- Metal parts powder coated to specification
- Easy transport and storage of units
